PRODUCT DIMENSIONS AND INSTALLATION

FUNCTIONAL DETAILS

Activation of the Early Warning alarm and Delayed Egress function

The Early Warning alarm functions (EW) are both, local and remote alarm indications to detect, deter and record unauthorised exit attempts. The Early Warning alarm operates in two stages.

Stage 1

Triggered on initial pressure being applied to the particular door fitted with the device in the form of a local audible and/or remote alarm. The initial pressure to the door is called "Nuisance Delay Period" and can be set from 0 to 3 seconds. After the Nuisance Delay Period, and if continuous pressure is applied to the door, stage 2 is triggered.

Stage 2

Activates both, local and remote alarm indications. At this time the device will release the door with an optional time delay of 0, 15 or 30 seconds. Any incident will be captured by the local CCTV camera, if the optional CCTV version MEM2400EXT-SC is installed.

PRODUCT ECO5700HS**HIGH SECURITY POWER SAVING ELECTRO MAGNETIC LOCKING DEVICE EcoMag™**

ECO5700HS

PRODUCT DESCRIPTION

The patented ECO5700HS model is a high security power saving Electro-Magnetic Lock with an individually encoded addressable armature plate. The lock will only recognize its own armature plate to prevent the device from being compromised by false plates.

Under normal, non-alarm conditions, the ECO5700HS "EcoMag" operates in a low current 'Sleep-Mode' of 70mA@24V with a holding force of 300kg. In the event of an unauthorised attempt to open the door, the ECO5700HS "EcoMag" "wakes up" and goes into an Alarm Mode with full current of 300mA@24V applied to the device, instantly increasing the holding force to up to 680kg.

The EcoMag operates on multi voltage 10-26VDC, provides an Early Warning (EW) signal output, has a built-in local Alarm Buzzer, with full monitoring of Lock Status & Door Status and long distance Light Panel indicator.

The device is provided with the FSH patented Anti-Tamper-Plate as standard.

PRODUCT FSH2500

ELECTRO MAGNETIC SHEAR LOCKING DEVICE SINGLE
DOOR MONITORED MORTISE MOUNT

FSH2500

PRODUCT DESCRIPTION

FSH shear locks are an evolutionary product based on the proven EML concept, designed for applications where the door swings up to a 180° degree arc.

Whilst a standard EML provides a tensile force, a shear lock differs as it resists a shear or sliding force. When the shear lock detects the door in the closed position, the magnet "sucks" the armature plate up by up to 5mm and traps the armature in the lock body frame.

Despite the small size of the FSH shear lock, it is capable of resisting up to 250kg of shear load. The shear lock accepts voltages from 12 to 24VDC.

TECHNICAL DETAILS

PART NO.	FSH2500

PRODUCT FES90M-P
 HIGH SECURITY ELECTRIC EcoStrike™
 WITH PRE-LOAD CAPABILITY – AUSTRALIAN FOOTPRINT

FES90M-P

PRODUCT DESCRIPTION

The patented FES90M-P motorised High Security Electric EcoStrike with up to 35kg Pre-Load capability is a revolutionary electric locking solution. With a high Pre-Load /Side-Load tolerance and minimal energy consumption in 'Sleep-Mode' it is a truly "Green Locking Solution".

The strike accepts voltages from 10 to 30VDC, is pre-drilled for extension lips and has a unique and simple fail secure (Power To Open)/ fail safe (Power To Lock) switch-over function.

The door strike provides 2 forms of monitoring:

1. LSS (Lock Status Sensor)
2. DSS (Door Latch Sensor)

The electric strike consumes current less than 300mA @ 12VDC at full 35kg pre-load only during locking and unlocking action. In the locked or unlocked state (Sleep-Mode), the electric strike consumes current less than 15mA@12VDC.

FES90MP comes with a 10mm strike lip as standard, to prevent possible personal injury and damage to clothing as with 15mm lips.

PRODUCT FSS1

HIGH SECURITY DOOR MONITORING SENSOR

FSS1 SERIES

PRODUCT DESCRIPTION

The FSS1 Series of High Security Door Monitoring Sensor are designed to provide a true high security solution for door position monitoring.

It is a state-of-the-art monitoring solution with a flush mount version for new construction, and surface mount version as a superior replacement for traditional magnetic balanced reed sensors.

Specifically developed for high security applications in government, correctional and military installations, the FSS1 Series High Security Door Monitoring Sensor consist of seven magnetic sensors that are used to detect a unique magnetic footprint from an array of magnets on the magnetic face plate. One sensor is used to detect the position of the magnetic face plate in relation to the device, while the other six sensors are used to determine the polarity, size, strength and position of the magnets on the unique magnetic face plate in relation to the memorised pattern. The FSS1 is equipped with sophisticated anti-tamper facilities.

The product is listed in the Security Equipment Evaluated Product List (SEEPL)

SPECIFICATION TEXT HIGH SECURITY DOOR MONITORING SENSOR FSS1

The contractor shall provide a High Security Door Monitoring Sensor "HSDMS" on each nominated door and/or location. The HSDMS must be SCEC approved to minimum SL4. The HSDMS must be on-site reprogrammable by the installer.

The High Security Door Monitoring Sensor shall utilise a minimum of seven magnetic sensors, one of which will enable magnetic positioning to marry up with a unique magnetic array plate in relation to the installed device.

The HSDMS will be capable to operate with door to frame gaps up to a maximum of 7mm and shall accommodate end-of-line modules being securely situated within the HSDMS enclosure.

The HSDMS shall have at least two tamper switches to detect unauthorized removal of the sensor cover. In addition, the HSDMS Flush Mount Version shall have a separate tamper

switch to detect the removal of the device from the door frame in which it is mounted.

The HSDMS shall be available as a Flush Mount, a Surface Mount with facility to accommodate conduit cable entry and Surface Mount unit with provision for cable entry from the rear.

The Flush Mount HSDMS must be fitted with mounting tabs and shall be 110mm long, 32mm deep and 35mm wide. The Surface mount HSDMS will be inclusive of threaded entry to accommodate the fitting of conduit and shall be 75mm long, 34mm high and 35mm deep.

The Surface mount "Non Conduit Version" HSDMS will exclude threaded entry, allowing for installer tailored "Rear Entry" of cabling and shall be 75mm long, 34mm high and 35mm deep.
